

Investment Vehicle: Separately Managed Account
Portfolio Manager: Jay Pestrichelli

Inception Date: September 2011

Strategy Overview

The Buy & Hedge Classic strategy by ZEGA Financial is designed to provide broad market exposure while limiting the downside risk in the event of a material market correction. The product is deployed in a SMA format and utilizes index based options and ETFs. The investor has long-term market exposure in an S&P 500 ETF that has been paired with a hedge that has a negative correlation to the market. The hedge is built using a combination of option positions. This strategy targets a high correlation to the S&P 500. The strategy looks to minimize the cost of hedging by possibly selling options premium on both out-of-the money calls and puts.

Methodology

- Purchases S&P 500 ETFs with ~95% of the portfolio value
- Downside put options are set at 10% out-of-the-money (OTM)
- Purchases extra shares of ETF at depressed price when protective put produces a profit
- May produce income by selling OTM calls using ZEGA algorithms—typically around 1 standard deviation movement
- Sells additional puts further OTM to generate income to offset cost of hedging—these short puts, when sold, limit the hedge protection but protection is typically still equivalent to a one standard deviation move in S&P 500
- For large accounts the options are built in laddered positions over 9-12 month windows using at least 2 rungs

Performance Statistics

	ZEGA Financial	S&P 500 Total Return	Barclays US Aggregate Bond Index
YTD Return	15.39%	21.83%	3.54%
Ann. Return: 1 year	15.39%	21.83%	3.54%

ZEGA Financial is a registered investment adviser and investment manager that specializes in derivatives. ZEGA is a separate accounts manager and all returns expressed herein are solely from the separate accounts business within ZEGA.

This report is supplemental information. The Buy & Hedge Retirement Strategy is a sub-composite to the Hedged Equity Master Composite that ZEGA maintains. The data in this supplemental report is for the accounts that were managed in accordance with the guidelines consistent with the Buy & Hedge Retirement strategy as described in this report. All of the portfolios included in the returns reported herein are also part of the Hedged Equity Master Composite.

Hedged Equity Master Composite includes all Hedged Equity strategies and accounts managed by ZEGA prior to and since ZEGA's inception. To qualify as a Hedged Equity strategy, the account must be invested with its assets in at least 70% in a diversified portfolio of Equities, Equity ETFs, or Equity indexes. The value is based on the notional dollars controlled. The portfolio must also have a hedge built in that limits the downside for the majority of the notional equity controlled. All portfolios that are at least 70% allocated to this strategy are included. The benchmark is the S&P 500. The benchmark is THE S&P 500. The S&P 500 Index is a collection of 500 of the largest publicly traded US Equity large cap companies.

ZEGA Financial claims compliance with the Global Investment Performance Standards (GIPS). To receive a full list of composite descriptions of ZEGA Financial and/or a presentation that complies with the GIPS standards, contact Jay Pestrighelli at 1-800-380-9342, ext 101 or jay.pestighelli@zegafinancial.com.

The prior performance figures indicated herein represent portfolio performance for only a short time period, and may not be indicative of the returns or volatility each portfolio will generate over a long time period. The performance presented should also be viewed in the context of the broad market and general economic conditions prevailing during the periods covered by the performance information. The actual results for the comparable periods would also have varied from the presented results based upon the timing of contributions and withdrawals from individual client accounts. The performance figures contained herein should be viewed in the context of the various risk/return profiles and asset allocation methodologies utilized by the asset allocation strategists in developing their model portfolios, and should be accompanied or preceded by the model.

Standard deviation is a measure of the dispersion of a set of data from its mean. The more spread apart the data, the higher the deviation. In finance, standard deviation is applied to the annual rate of return of an investment to measure the investment's volatility. Employee accounts do not pay advisory fees, so the returns illustrated for the strategy are higher than they would be if employee accounts paid similar fees.
